

## **XACORE HEADSET IS THE CHOICE OF KENTUCKY STATE POLICE SWAT**

August 9, 2011- Kentucky State Police (KSP) SWAT have chosen the new x-62000 tactical communication headset from Xacore. This unique headset integrates four (4) headborne external microphones to pick up environmental audio, along with two (2) independent Digital Signal Processors (DSP) loaded with proprietary hearing algorithms to provide operators with near human ear sound localization and situational awareness, while providing impulse and continuous noise protection as well as “bionic” hearing.

“After doing extensive testing, the guys at KSP SWAT have been great advocates of this headset. It’s nice to be able to offer a headset to tactical teams that allows them to protect their hearing and maintain full situational awareness at the same time. It’s been an unfortunate reality for too long that tactical officers protect their ears in training but remove their hearing protection on operations, mainly because there wasn’t anything available on the market that they trusted...” said Tim Paquette, Senior Account Manager at Xacore.

The Kentucky State Police (KSP) was founded in 1948 when it replaced the Kentucky Highway Patrol. The department's officers are called *troopers* and its nickname is *The Thin Gray Line*.

### **About Xacore**

Founded in 2003, Xacore is the market leader in DSP headset innovation and its mission is to supply lower-cost high-quality professional grade audio solutions to the LMR market place. As a structured boutique shop, we provide our customers a streamlined experience with direct access to engineering, customer support, logistics and management. Supported by our in-house engineering staff, Xacore’s capabilities reach far into the realm of radio communications engineering. From our commercial off-the-shelf (“COTS”) products to our engineered solutions, Xacorians are masters of Gerber files, firmware, printed circuit board (“PCB”), analogue, digital, RF and mechanical design.
