

THREAT4 x-62000 HEADSET NOW FIELDDED AT LONDON POLICE SERVICE

December 9, 2011 Toronto, ON- The new Threat4 x-62000 headset is proving quite popular with tactical teams in the province of Ontario. Following the Ontario Provincial Police decision to order several hundred x-62000 headsets in 2011, London Police Service is one of several Ontario teams to follow suit and purchase the new Threat4 headset for their Emergency Response Section (ERS).

This unique headset integrates four (4) headborne external microphones to pick up environmental audio, along with two (2) independent Digital Signal Processors (DSPs) loaded with proprietary hearing algorithms to provide operators with near human ear sound localization and situational awareness, while providing impulse and continuous noise protection as well as enhanced (“bionic”) hearing.

The London Police Service Emergency Response Section was created in 1992 to provide support services in specialized areas by assisting in the resolution of high risk incidents using minimum force. The London Police was formed in February 1855, one month following the incorporation of the City of London. Since 1855, London's population has grown from 10,000 to over 350,000 while the London Police has grown from a staff of 8 constables to a staff of almost 800 officers and civilians.
