

THE PENTAGON SELECTS XACORE'S NEW X-62000 TACTICAL HEADSET

June 24, 2011- The Pentagon Force Protection Agency (PFPA) have evaluated and purchased the new x-62000 series tactical radio communications headset, which merges hearing algorithms and hearing protection technologies to achieve near human ear performance, while maintaining 32dB-39dB hearing protection. PFPA took delivery of the headsets for their tactical unit in July.

“We’ve been working with the PFPA for quite a while, so they were a natural choice to field test our new x-62000 headset when it was released. We were confident we had designed the best tactical communication headset available, but it was still nice to hear the rave reviews coming from these guys” said Senior Account Manager Tim Paquette.

The Pentagon Force Protection Agency is a civilian Defense Agency within the Department of Defense charged with protecting and safeguarding the occupants, visitors, and infrastructure of the Pentagon, Navy Annex and other assigned Pentagon facilities.

About Xacore

Founded in 2003, Xacore is the market leader in DSP headset innovation and its mission is to supply lower-cost high-quality professional grade audio solutions to the LMR market place. As a structured boutique shop, we provide our customers a streamlined experience with direct access to engineering, customer support, logistics and management. Supported by our in-house engineering staff, Xacore’s capabilities reach far into the realm of radio communications engineering. From our commercial off-the-shelf (“COTS”) products to our engineered solutions, Xacorians are masters of Gerber files, firmware, printed circuit board (“PCB”), analogue, digital, RF and mechanical design.
